

Job Description: Development Consultant

Location: Remote – within the UK as frequent travel will be required to customer sites.

Salary: Negotiable with great benefits package

About Us

Interneuron CIC aim to be the leaders on designing, developing and supporting open source software for Health+Care providers globally. We are already helping many NHS and Private organisations transform the way they approach Health+Care IT problems, now we need an additional rock-star customer facing development consultant/engineer to join us and help make this happen.

The role

The primary responsibility for this role is to help us build, implement and support our applications. There will be no typical day – you could be working remotely on a Monday burning through the product backlog, Tuesday you could be demoing the system with colleagues to a prospect in Europe, Wednesday helping to deploy new releases to an existing customer implementation. No week will ever be the same.

Qualities

- Comfortable working in a customer-facing development role
- Confident talking to all levels of customers from engineers to chief executives
- Passionate about Healthcare
- A self-starter and able to manage your own work schedule
- Ability to analyse, understand and document complex problems, processes and workflows

Essential experience:

- Relational database systems such as PostgreSQL and SQL Server.
- .NET Framework and in particular .NET Core – C# ideally
- JavaScript
- Web Development using the latest web technologies – Angular, IONIC, Knockout JS, Vue JS etc.
- Full SDLC experience following Agile methodologies
- Building and consuming RESTful APIs

Desired Experience

- Healthcare integration experience such as HL7, FHIR, IHE etc
- Healthcare specific Open standards and terminologies such as OpenEHR, Snowmed CT, OPCS etc
- Experience with NodeJS and NPM
- Experience with containerisation and virtualisation technologies
- Experience contributing to Open Source projects
